

# Maker Faire comes to Zurich

September 17-18, 2016 at Dynamo

## Maker Faire is a family-friendly festival for digital crafts and new technologies, with a focus on making, learning and sharing.

The event is an opportunity for exponents of the maker and Do it Yourself movement to present their work to a broad, interested public and pass on their excitement through interactive exhibits, workshops, discussions and talks.

Families, kids and young adults in particular are presented with numerous and playful ways to discover the digital technologies of the future, scientific principles and the unconventional methods of makers.

Here are some of the topics – even more important than technology are humans, fun and diversity!

3D-Printing • Laser-Cutting • Microcomputers • Internet of Things • Hacks • DIY • Electronics • Soldering • Knitting • Wearables • Open Source Hardware • Open Data • Steam Punk • Serigraphy • Robots • Drones • Minecraft
